Ex 3: Credit Card Fraud Detection

Name: Vasundhara.B

Roll No: 3122 21 5002 119

Using specific predictive models, you will forecast credit card fraud in the transactional dataset in this project. Create your own dataset for this project. You will use a wide range of Python libraries in this project, including Numpy, pandas, seaborn, [matplotlib](#), etc. You can efficiently work with the two validation matrices- recall matrix and precision matrix, using Numpy.
